

Job Description

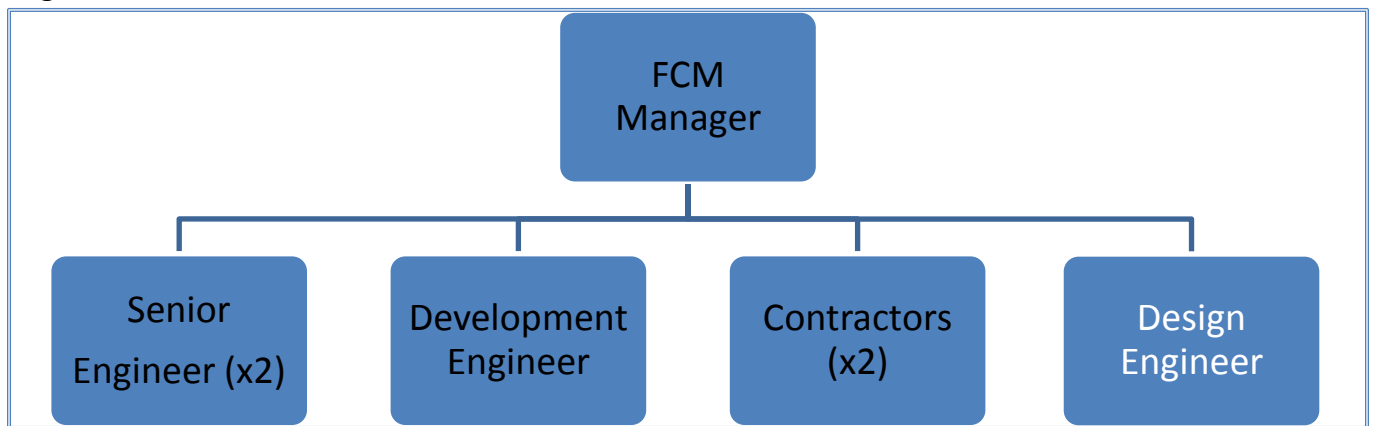

Job Title: Design Engineer

Reports to: FCM Manager

Direct reports: None

Budgetary Responsibility: None

Organisation Chart:

Purpose of the Job

To provide design engineering support to the Mechanical Engineering group, for the Fuel Cell Module team.

Key Accountabilities

- Progress design activities to deliver components that meet their performance, reliability and durability requirements
- Support project planning, focus on delivery to meet business objectives
- Report results in line with overall programme
- Provide feedback to project/technical leaders on design and development activities
- Work closely with other internal departments
- Supplier development and liaison
- Keep project plans up to date (to include Project Plans and DVP&R)
- Work closely with the FCM Manager to define the scope of design projects and agree priorities
- Attend Design and Development Reviews, assist with DFMEA updates
- Agree requirements, functions and design specifications with Systems Engineering
- Carry out post mortem of components and report back on findings

Key Results Areas – to do

- Produce design to ensure performance and reliability objectives are met, and shortfalls, deviations in performance and durability from the required functional specification are identified and reported

- Prove design durability with Design Validation testing
- Complete all tasks in a timely manner to ensure program delivery on or ahead of schedule
- Develop and maintain sub-system project plans for design and development of parts or systems

Internal & External Relationships

- Daily contact with key stakeholders to ensure programme commitments are achieved
- Close working relationship with other members of Fuel Cell Module and mCHP teams to coordinate activities and component interface development
- Interface with Systems Engineering and Manufacturing Operations for seamless technology transfer and ongoing support during scale-up
- Develop supplier relationships with procurement function

Knowledge, Skills and Experience

Required:

- Degree qualification from a leading university in mechanical engineering (or similar)
- A track record of delivering innovative engineering solutions, with a focus on design and development.
- Strong technical, problem solving and communication skills using recognised problem solving methodologies (e.g. Six Sigma or equivalent)
- Strong experience of Pro-Engineer CAD package

Desirable:

- Masters degree in mechanical engineering (or similar)
- Chartered Engineer or working to become chartered
- Detailed knowledge of mass manufacturing methods and influence on design

Remuneration

The ideal candidate will receive a competitive salary, together with a benefits package including excellent contributory pension, cycle to work scheme, childcare voucher scheme and life insurance.

To apply

Please send a full CV detailing relevant experience together with details of current remuneration package to: recruitment@cerespower.com or Ceres Power Ltd, Viking House, Foundry Lane, Horsham, RH13 5PX, www.cerespower.com
